EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. David Klein on 22 July 2004.

The application has been amended as follows:

In the Claims:

Please amend claim 1 as follows:

1) A refined liquid level detector structure comprising a liquid level detecting element and a telescopic external casing;
wherein said liquid level detecting element at least comprises a circuit device, a holder and a probe, said holder having plural fixing holes and a water inlet mounted thereon, said probe being set at a facet of said holder and said circuit device being set on another facet thereof;
and said telescopic external casing being assembled by plural tubes which are sleeved on each other and having a length of the telescopic external casing being [to be] adjustable according to the length of said probe, and each of said plural tubes having inclined openings [~~averagely mounted thereon~~] formed therein and plural lugs mounted on an external tube thereof for passing a fixing element therethrough [~~a fixing element~~] which is fixedly secured to said fixing hole of said holder.

Allowable Subject Matter

2. Claims 1-7 are allowed.

3. The following is an examiner's statement of reasons for allowance: A refined liquid level detector with a telescopic external casing, in combination with all other limitations of the independent claim is not disclosed nor deemed obvious in view of the prior art of record. The closest prior art to the present invention is the patent of Liang (U.S. Patent Number 5,718,146). Liang discloses a waste level detector for vehicle cesspools whereby a level sensor is covered by a perforated housing that is assembled by a plurality of tubes attached together end-to-end depending on probe size. The present invention, however, would be an improvement as the telescopic housing can account for a variety of probe lengths without previous knowledge of the probe being used, which would render an improvement over the Liang patent.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The examiner has cited various references that are deemed pertinent to the general state of the art of the present invention.
